REFLECT: C++20 Static Reflection library

license MIT

release v1.2.3

build

try it

online

[https://en.wikipedia.org/wiki/Reflective\\_programming](https://en.wikipedia.org/wiki/Reflective_programming)

Features

- Single header (<https://raw.githubusercontent.com/qlibs/reflect/main/reflect> - for integration see [FAQ](#))
- Minimal [API](#)
- Verifies itself upon include (can be disabled with `-DNTEST` - see [FAQ](#))
  - Basically guarantees no UB, no memory leaks\*
- Compiles cleanly with ( `-fno-exceptions -fno-rtti -Wall -Wextra -Werror -pedantic -pedantic-errors` | `/W4 /WX` )
- Agnostic to compiler changes (no ifdefs for the compiler specific implementations - see [FAQ](#))
- Optimized run-time execution and binary size (see [performance](#))

# So why not just `static_assert`?

---

<https://wg21.link/p2741> “User-generated static\_assert messages”

**Answer:** It does not result in substitution failure.

```

1  #include <https://raw.githubusercontent.com/patrickroberts/reflect/45e9239b094429a9e1874f465b712866063f0a29/reflect>
